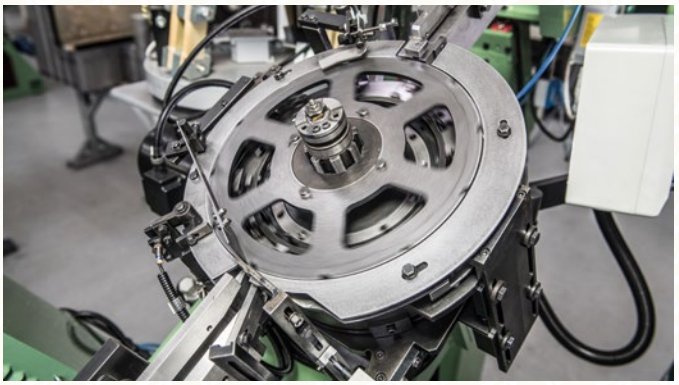
Multifunction machines

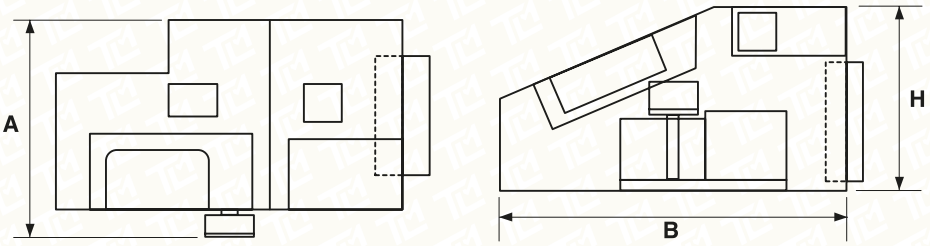
with bushing loader **RP8 LD + CB**

RP8LD with roller block slide in combination with special bushing loader. Bushing loading and rolling up to diameter 16 mm.

Combined machines – modular or multi-function

Machines obtained from the combination of different modules, allowing for example the implementation of pointing, washer loading and final screw threading in a single step without having to load and unload parts to be worked, since all processing takes place in tandem. This allows user customers to perform further processing simultaneously to threading/rolling operations. Reducing production times increases the profit margin on the final product. Different module combinations are available according to the processing to be obtained on the final product. Each module is bypassable so as to exclude any unnecessary processing.





Technical features: approximate values. The machine speed can change according to the material used and the type of item to be rolled. Measures in mm.

Standard tool sizes (mm)
150x170x h 60/80 sp.30
