

Outdated Thread Rollers? Remake Them Like New!

TLM Srl, Tortona (AL), Italy, reports, “Recently, we acquired a very old thread rolling machine from a client, one of the first built by TLM. We completely overhauled and modernized it, modifying its transmission and updating it. Today, this thread roller is in such a condition that it is difficult to distinguish it from a new machine. Furthermore, it has been transformed into a combined machine by adding a state-of-the-art pointing machine at the rear. The result is visible in the accompanying photos: a thread roller that looks new, with the versatility of a combined machine.

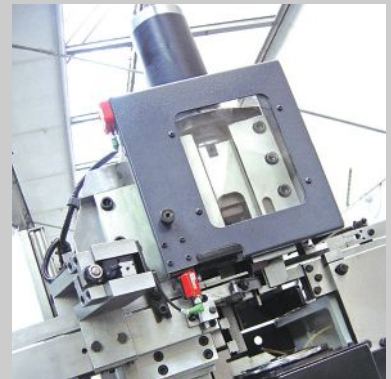

“Our philosophy is not to discard anything. Well-constructed mechanics can be updated, modernized and made more efficient. We specialize in this comprehensive reconditioning process

for TLM machines or those from other manufacturers. We examine the condition of the machinery and evaluate with our clients the most cost-effective actions to undertake. This model of thread rolling machine upgrade ensures savings on purchase costs, easier adjustment and

includes a specific warranty.”

Since 1979, TLM has been operating on the world market for the construction of machines for threading, chamfering, assembling, deforming, sorting and inspecting.
