

Numerous solutions from TLM

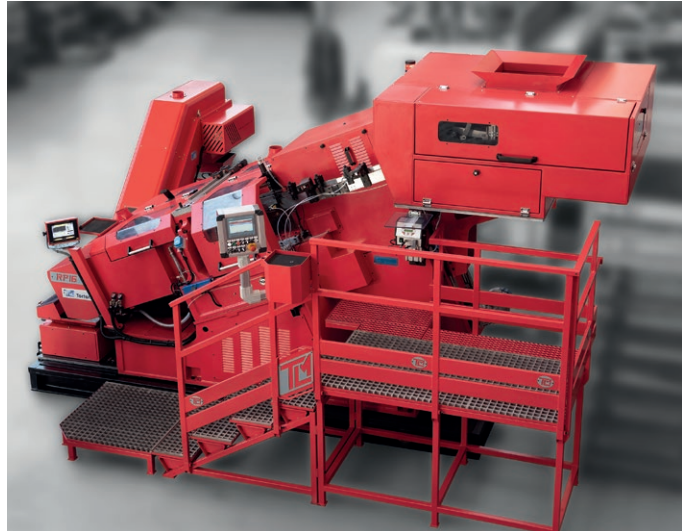

Since 1979 Italian-based TLM has been operating on the world market, producing a host of thread rolling machines for the fastener industry – becoming a qualified partner who can offer expertise, technical support, as well as timely responses and providing flexibility to customers.

TLM can offer a wide range of equipment, including machines for threading screws and bolts, machines for chamfering or for screw tips, machines for assembling washers and screws, as well as special machines for making deformations on screws. "We design and produce dedicated machines, in-line with the specifications of customer companies, striving to fulfil all requirements or individual requests," explains TLM Srl.

TLM's product portfolio includes a wide range of solutions, including flat die thread rolling machines from micro diameter 1mm up to 30mm, with mechanic introduction system and grinded monoblock head structure, for best precision and stability. The company also offers rotary thread rolling machines (roll and segment) from diameter 4mm up to 20mm; five models of chamfering machines from 3mm up to 22mm; as well as washer assembly stations (single or double) with three sized carousels with a diameter of 150mm, 200mm and 300mm – for micro washers up to 60mm.

To add to this, TLM can also supply combi machines, such as threader and pointer; threader, pointer and washer assembly station; as well as flat die machine and rotary machine for threading of two different diameters in a single line sequence.

Other solutions include bushes assembly stations, loading systems for screws, bolts and washers, stud loading and orientating systems,

overhaul of flat die machines and rotary machines, as well as, finally, applications of automations designed for the customers. +

TLM, the updated product list

- Flat die thread-rolling machines

from micro diameter 1 up to 30 mm, with mechanic introduction system and grinded monoblock head structure, for best precision and stability

- Rotary thread-rolling machines

(Roll and Segment) from diam. 4 up to 20 mm

- Chamfering machines

5 models from 3 up to 22 mm

- Washer assembly station (single or double)

with 3 sizes carousels: diam. 150-200-300 mm, from micro-washers up to 60 mm

- Bushes assembly station

- Kombi machines:

- Threader + Pointer

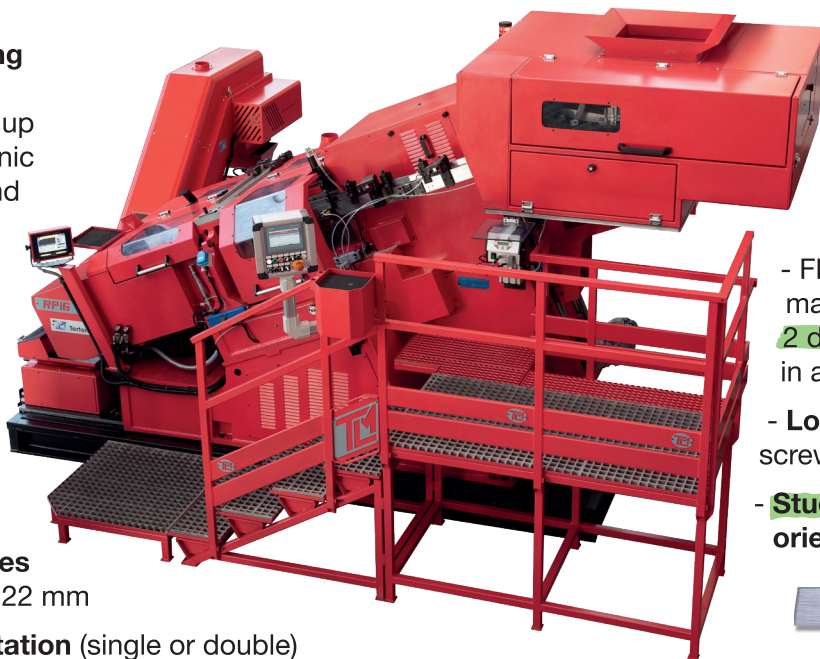

- Threader + Pointer + Washer assembly station

- Flat die machine + Rotary machine, for threading of

2 different diameters in a single line sequence

- Loading systems for screws, bolts and washers

- Studs loading and orientating systems

Built to perform
since 1979
